Student ID: 31109667

Lab No: Tutorial 06

Tutor Name: Dr Grace Ting

Homework

Task 1 – Chartjunk

- a) Identified chartjunk:
- i) Total revenue by country
 - Country map icons are considered as chartjunk as the country names are already being written down in the x-axis below
 - ii) Gross margin of all retailer types
 - The text annotations that show the gross margin value for some of the retailer types are considered as chartjunk as they encode the same information as the gross margin value that are originally written outside each section of the pie chart
 - iii) Products total quantity
 - Line chart is considered as chartjunk as it technically encodes the same information as the bar chart
 - Picture of product eyewear and woods are also considered as chartjunk as they kind of distract the users in understanding the visualization
 - iv) Diagram found on the top right corner of the dashboard
 - v) Background color e.g. black for pie chart

Task 2 – Colour, Layout and Typography

- a) Improved aspects:
- Layout: the title is placed at the top with the map at the visual center. This enables the viewer to know that the map is used to show the Florida demographics. Only a few horizontal sight lines are found between each section.
 - Typography: sans-serif typeface is used in this task where the font is arial. The title has a larger weight and font size as compared to the subtitle and the text in order to form a clear hierarchy of elements.
 - Diagram: two interesting facts about the population of Florida is being mentioned in the line chart by using text annotations. A dotted line for each state is used to estimate the population in 2010. The legend is replaced by using color coded title in which each color in the title corresponds to each state.
 - Color: The word “Florida” in the text is encoded using orange color in order to match its color in the line chart.
 - Tooltip: the tooltip is modified by using a clear hierarchical structure in which title has a larger font with orange color which represent the state of Florida as compared to the elements below

SALES REPORT 2012

Total Revenue By Country

Gross Margin of All Retailer Types

Products Total Quantity

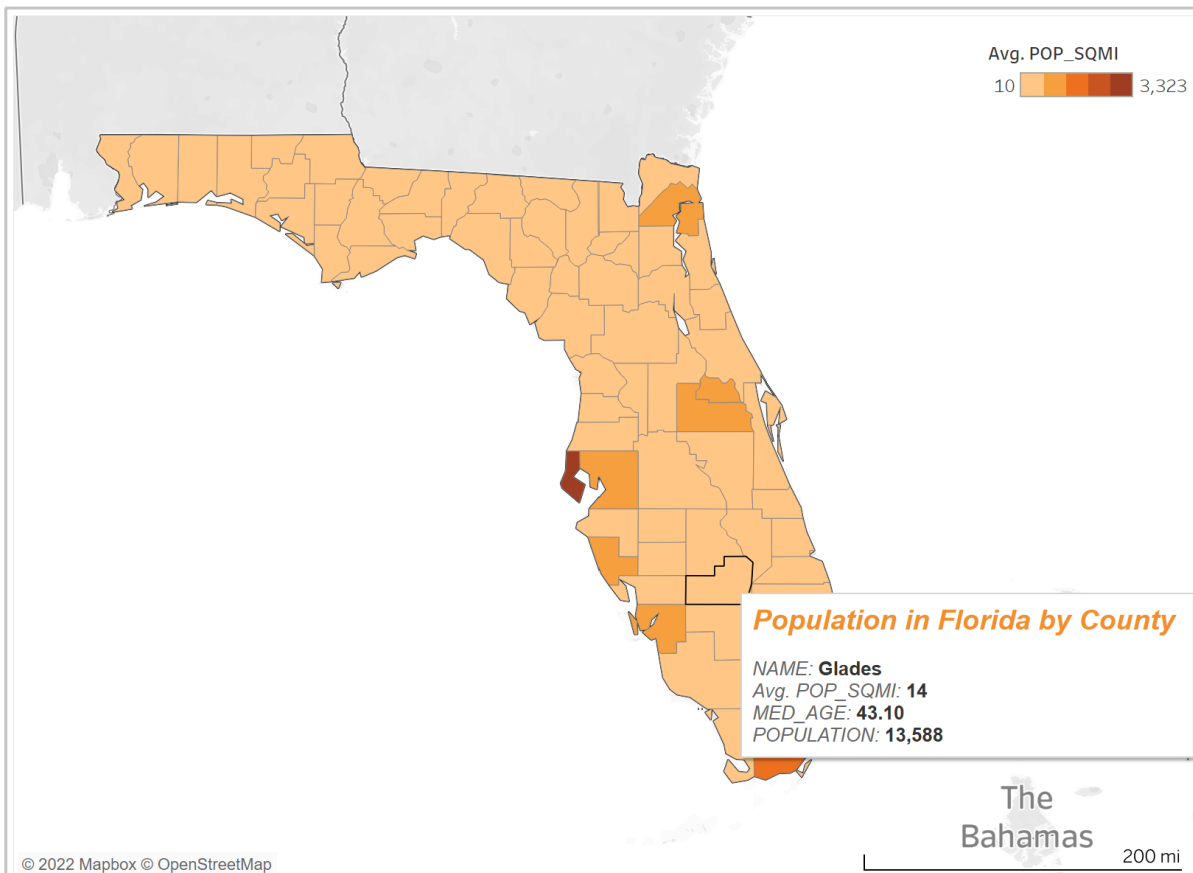

Total Revenue of All Retailer Types

Florida Demographics

Total **population** per square mile

Population of California, Florida & Texas from 1820 to 2010

Florida is the **third-most populous state** in the **United States**. Its residents include people from a wide variety of ethnic, racial, national and religious backgrounds. The state has attracted immigrants, particularly from Latin America. **Florida's** majority ethnic group are European Americans, with approximately 65% of the population identifying as White. National ethnic communities in the state include Cubans, who migrated en masse following the revolution in mid-century. They have been joined by other immigrants from Latin America, and Spanish is spoken by more than 20% of the state's population, with high usage especially in the Miami-Dade County area.

With a population of 18.8 million according to the 2010 census, **Florida** is the **most populous state** in the **Southeastern United States**, and the second-most populous state in the South behind Texas. Within the United States, it contains the highest percentage of people over 65 (17.3%), and the 8th fewest people under 18 (21.9%).
